## **ADVANCED WIRELESS COMMUNICATIONS BECOMES MEMBER OF SAFER BUILDINGS COALITION**

February 7, 2022

LAKEVILLE, MN: Advanced Wireless Communications is very pleased to announce that it has become a member of the Safer Buildings Coalition (SBC). Safer Buildings Coalition is an independent, not for profit organization providing leadership and education to advance policies and technologies that ensure effective in-building communications capabilities for public safety personnel and the people they serve. Membership includes police and fire chiefs, fire marshals, legislators and manufacturers.

Advanced Wireless is a leading provider of in-building amplification systems and distributed antenna systems (DAS) to ensure reliable radio coverage to police, fire and other emergency responders. We are pleased with our new relationship with Safer Buildings Coalition, and we look forward to becoming an active member. SBC is the leading industry organization supporting the vital communication needs of first responders through education, policies, and technology guidelines.

Our association with Safer Buildings Coalition underscores our commitment to our customers, building owners and first responders to provide reliable police/fire radio communications.

The requirements for reliable in-building communications are defined in part by the National Fire Protection Association (NFPA). In most jurisdictions, it is the responsibility of building owners to achieve this level of radio coverage and enforcement activities are increasing.

For question or to learn more, please contact Advanced Wireless Communications.
